

docs4llm

Make your docs usable by LLMs.

A docs URL becomes a hosted MCP server that AI clients can search, understand, and use.

DOCS
TO
TOOLS

Human docs. Agent gaps.

The knowledge is
present.
The interface is missing.

Developers, product teams,
and agents all pay for that
gap in repeated context
work.

What exists today

01 Documentation sites

good for people

02 OpenAPI specifications

good for schemas

03 GitHub READMEs

good for contributors

04 RAG chatbots

good for answers

Agents need a dependable tool interface.

One URL is enough.

docs4llm reads the documentation, understands its structure, and exposes a hosted MCP interface.

A structured tool layer beats another unstructured context window.

The work moves in one direction.

Input -> analysis -> hosted tools

Convex

Project state, workflow events, and realtime conversion status.

Next.js + React / TypeScript / Gemini / Drizzle / Convex / Upstash QStash / MCP SDK

No manual mapping. No repeat setup.

docs4llm converts the source once, then makes it useful everywhere.

01 Multi-source ingestion

Docs, OpenAPI, Postman, GitHub, MD/MDX, and HTML.

02 AI tool generation

Extract endpoints, workflows, and typed tools.

03 Tool validation

Check schemas and smoke-test before publishing.

04 Hosted MCP endpoint

One remote interface for every MCP-compatible client.

The innovation is a reusable interface between the documentation web and AI agents.

Who wins?

01 Developers

Less hunting. Less manual setup.

02 Product teams

One source of truth across tools.

03 AI agents

Structured context they can call.

Why it scales.

Serverless deployment

Hosted MCP endpoints keep operations lightweight.

Queue-based processing

Crawling and analysis scale separately from live tool calls.

Convex coordination

Realtime state and workflow events stay in one backend.

Docs become AI infrastructure.

Why docs4llm should be selected

It makes trusted documentation practical for the next generation of software builders: LLMs and agents.

Demo flow

PASTE DOCS URL -> BUILD MCP TOOLS -> CONNECT AGENT

ONE DOCUMENTATION SOURCE

Many AI clients.
One dependable interface.
